

Download and install Cloudflare VPN

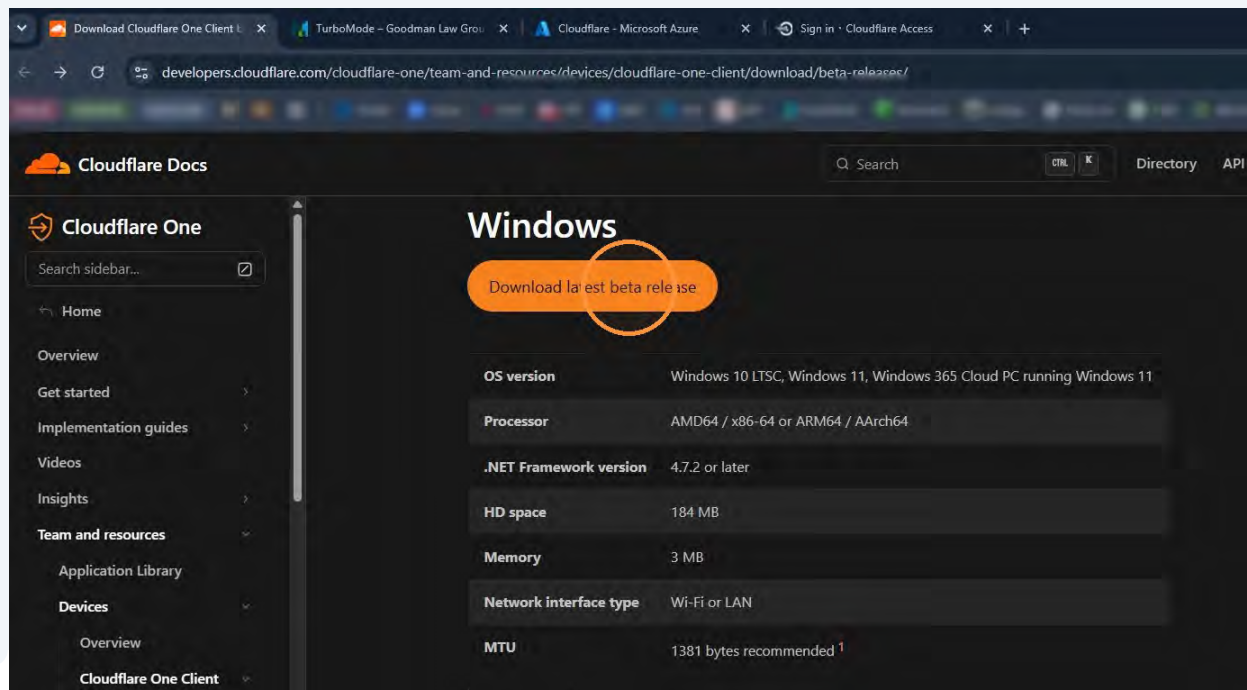

Cloudflare VPN will be used to access the TurboMode server remotely.

1

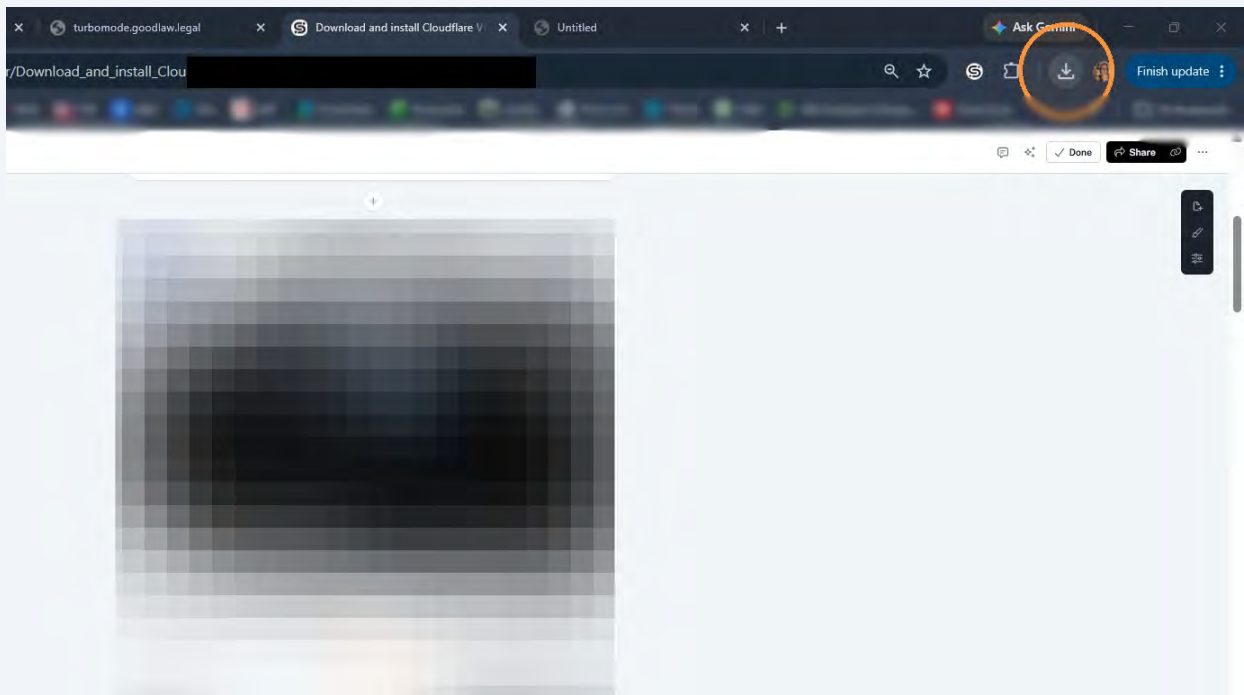

Navigate to:

<https://developers.cloudflare.com/cloudflare-one/team-and-resources/devices/cloudflare-one-client/download/beta-releases/>

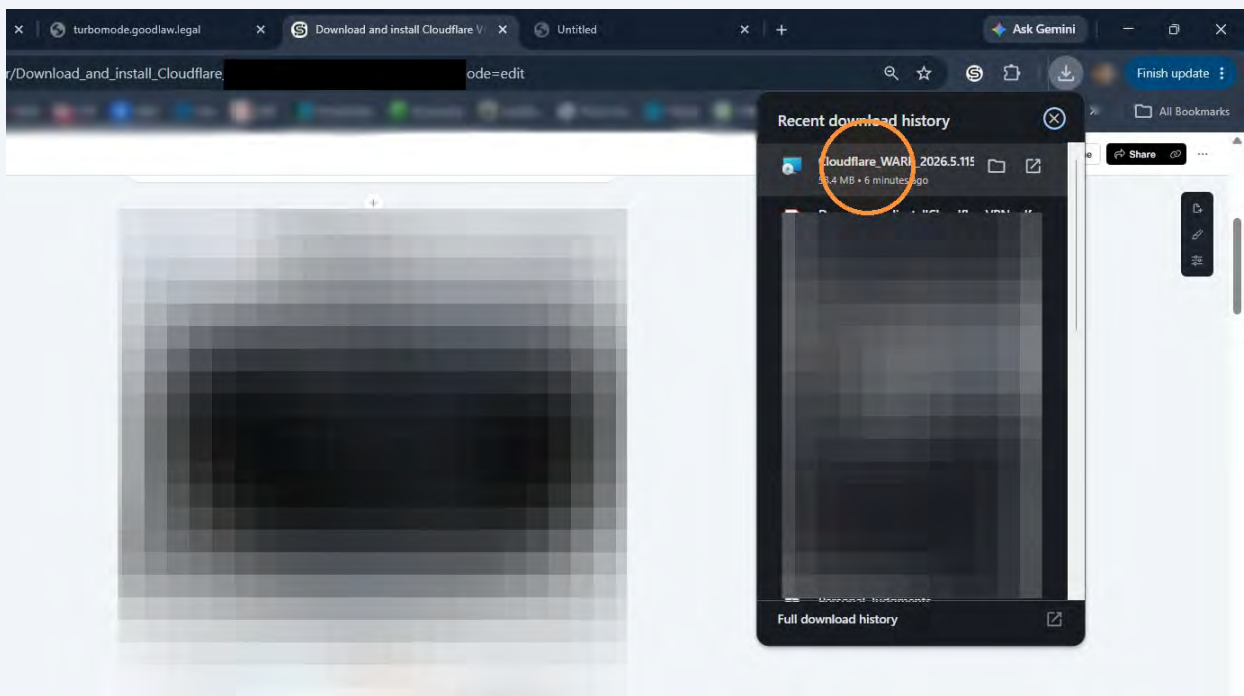

Click "Download latest beta release"

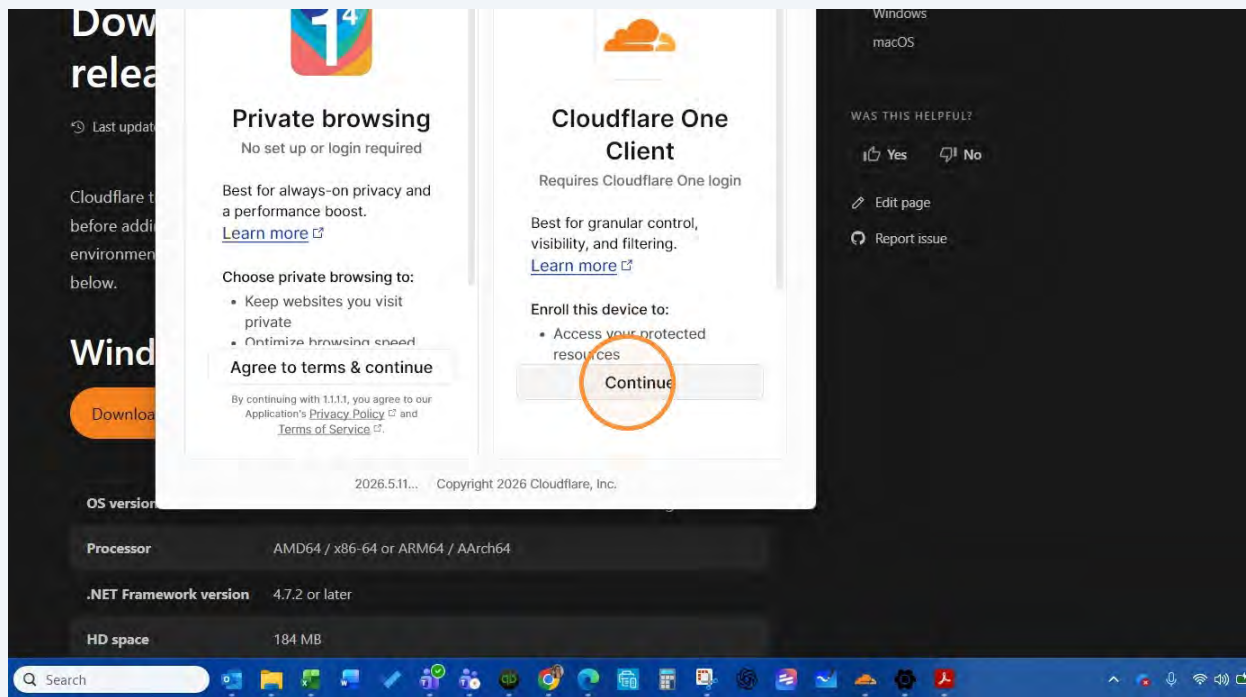

2 Click "Downloads"

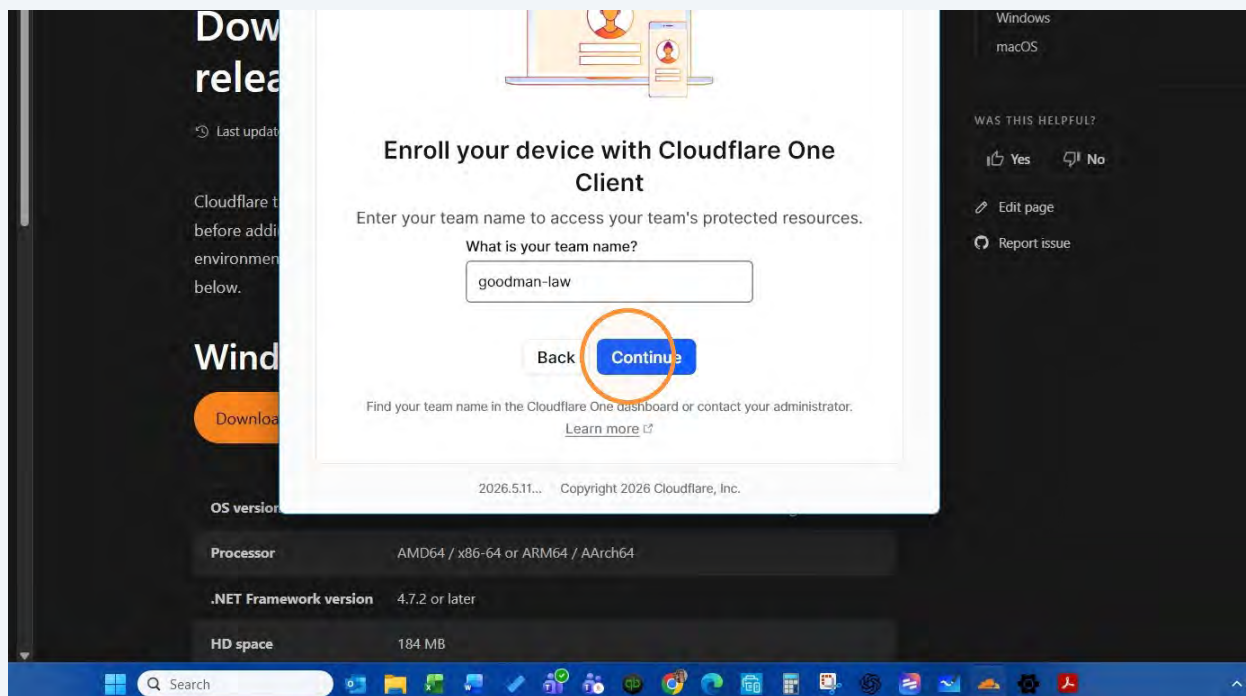

3 Click "Cloudflare_WARP_blahblah"

4 Once installation is complete, click "Continue" under Cloudflare One Client

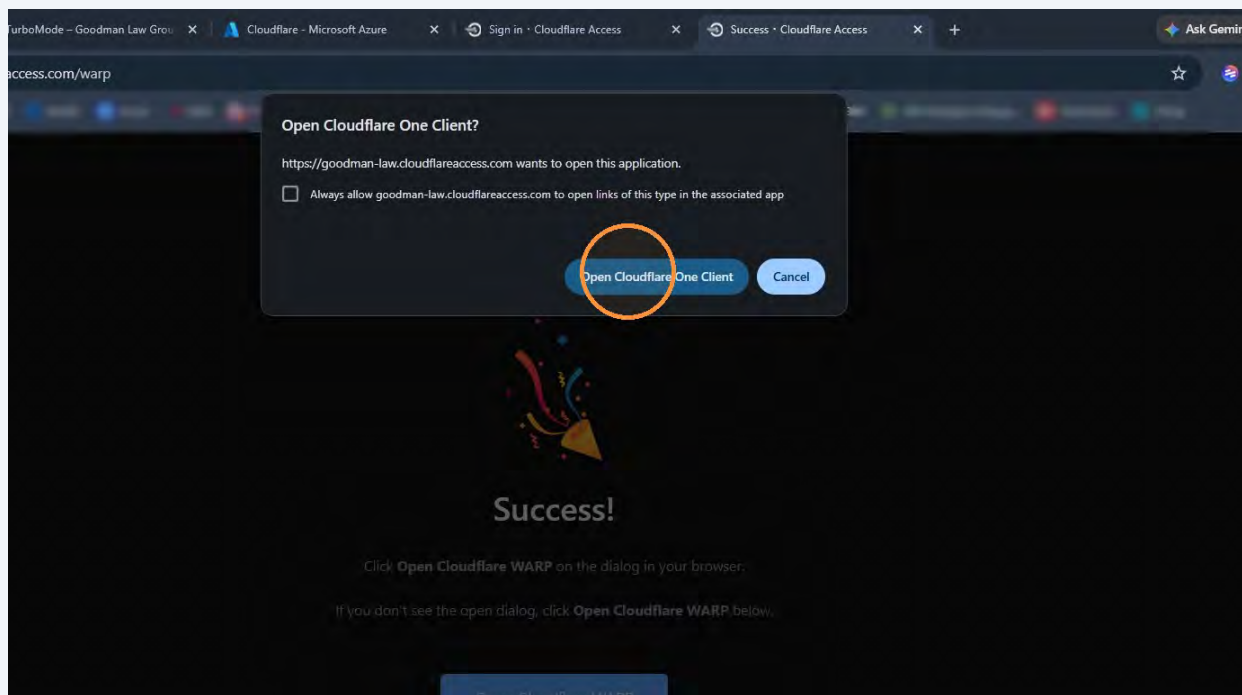

5 Enter " **goodman-law**" for your team name. Click "Continue"

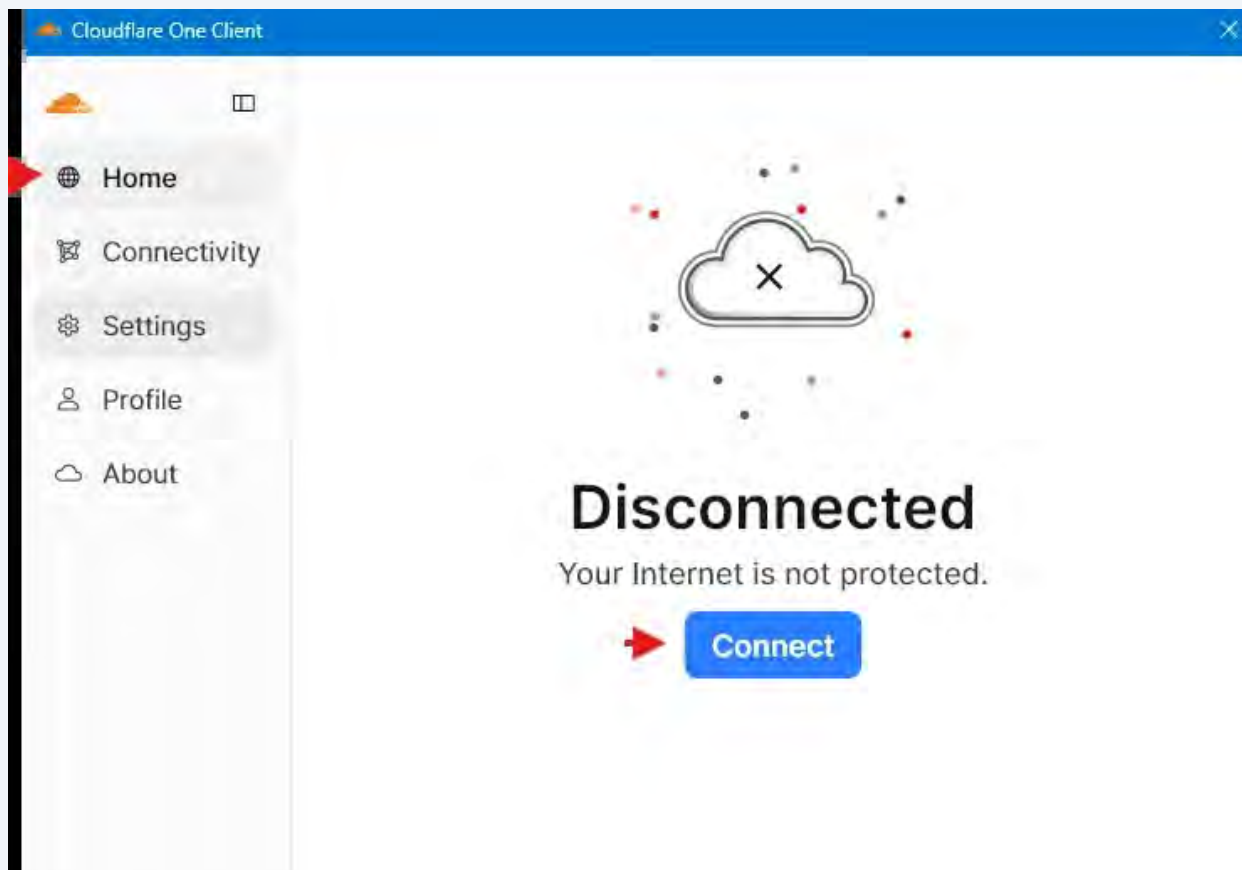

6

A new browser tab will open. On pop-up, click 'Open CloudFlare One Client' button. If you don't get a pop-up, select the blue Open Cloudflare WARP button.

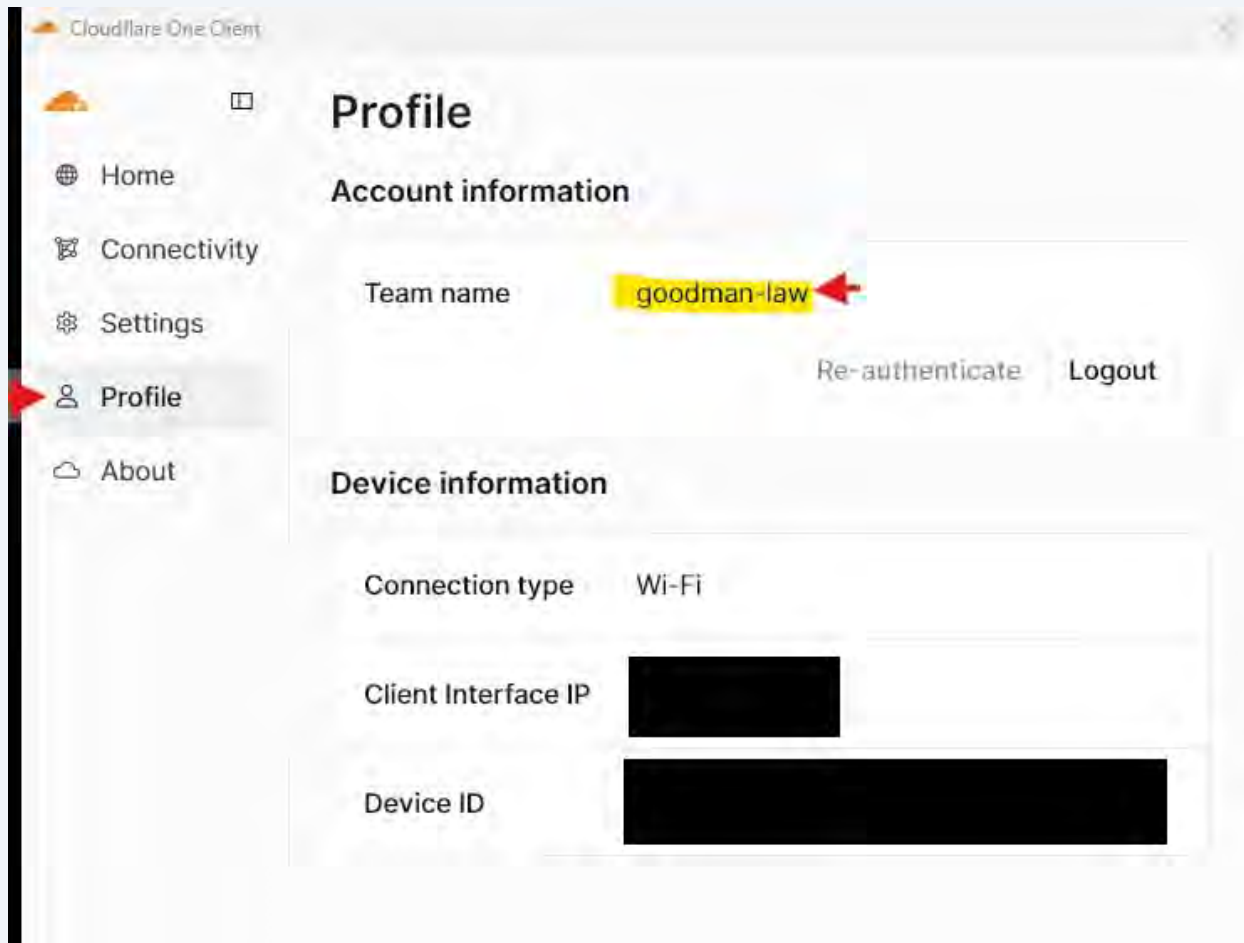

7

Cloudflare will open in another window. Click Connect from CloudFlare Home screen

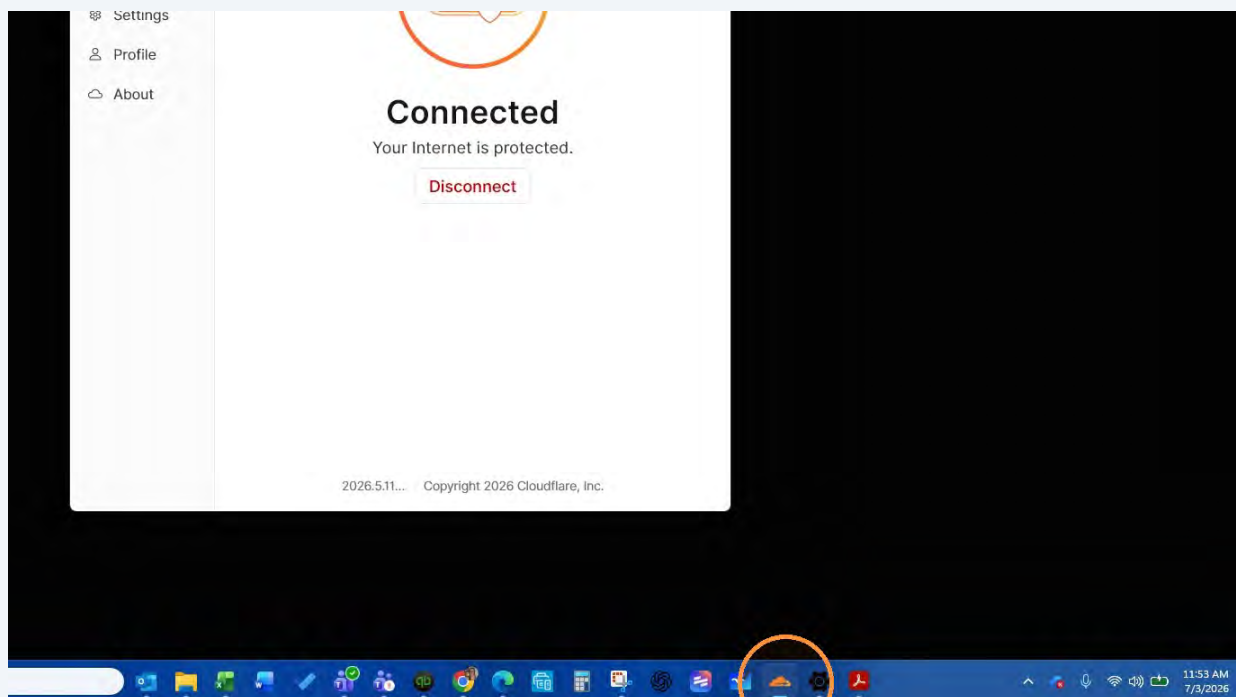

8

Confirm your profile is correct by navigating to Profile. Team name: **goodman-law** all lowercase, with the hyphen, no spaces.

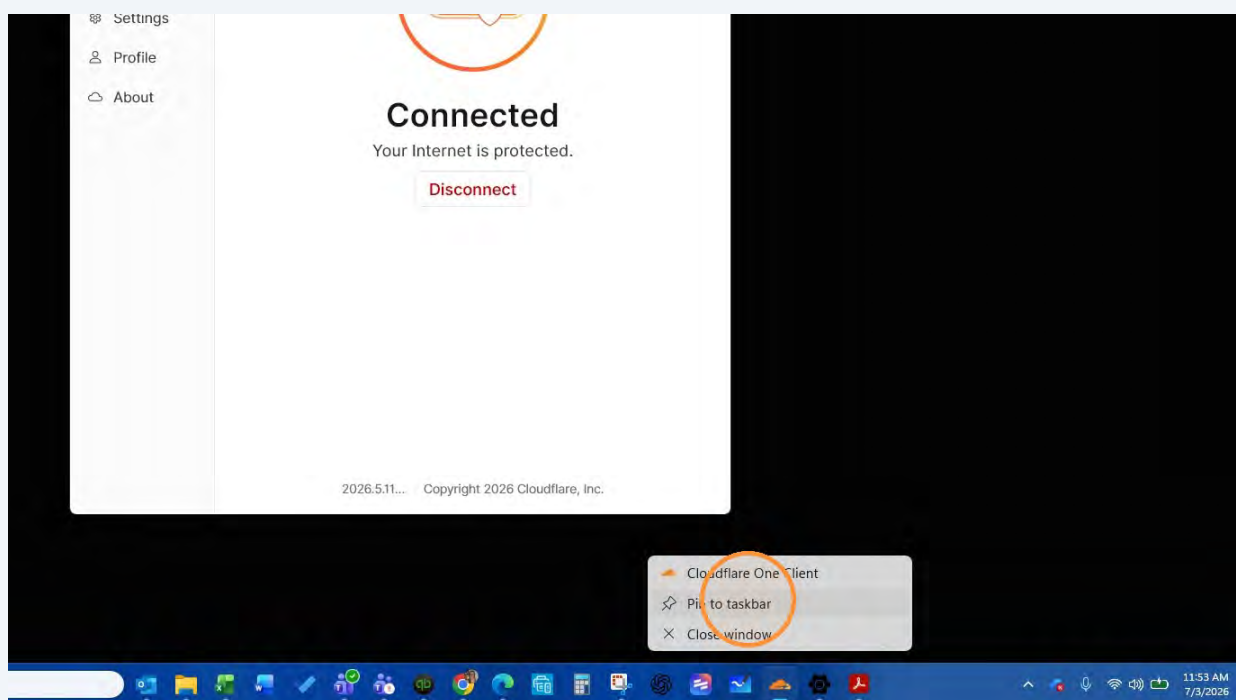

9

(Recommended but not required: Pin Cloudflare to your taskbar by right clicking the Cloudflare icon)

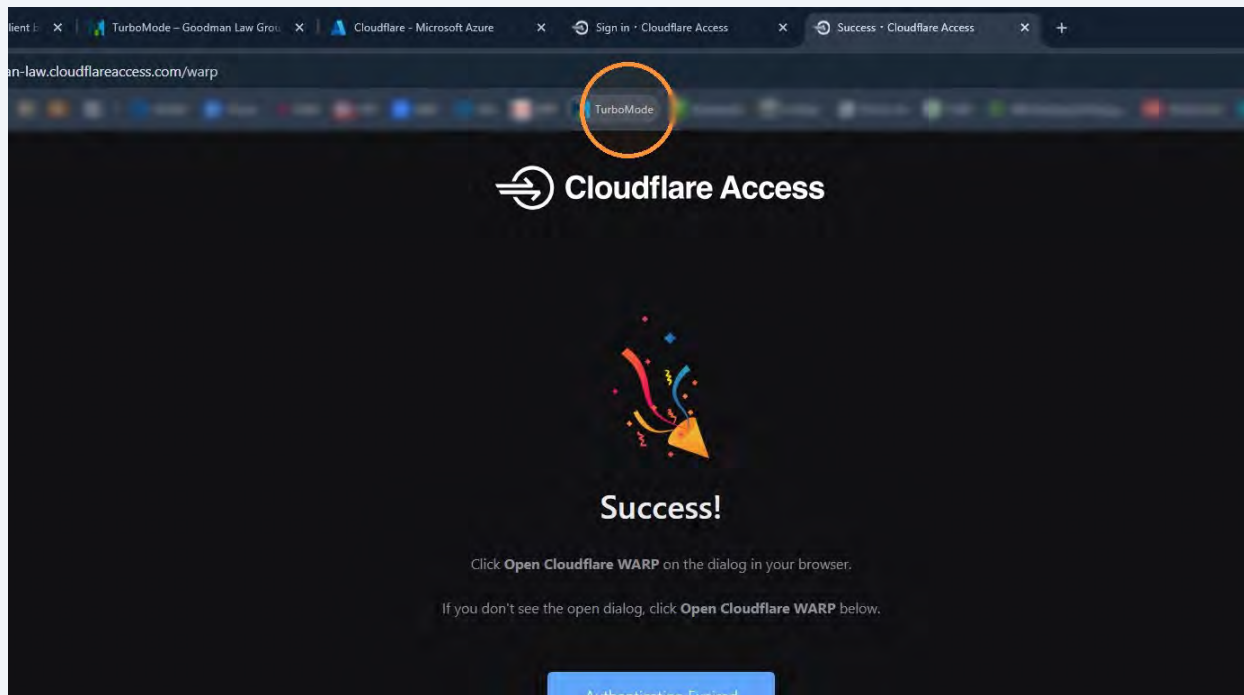

10

Click "Pin to taskbar"

- 11 In your browser, navigate to TurboMode.

- 12 If TM opens with a green VPN lock icon in the top-right, you are securely connected via the VPN. Proceed to sign in as usual.
